Message from **ANVC** **President**

Dear Colleagues,

I am thrilled to spotlight the rich variety of educational offerings that our association provides to empower and elevate the skills of our neurovascular clinicians. Our commitment to delivering comprehensive review courses ensures that our members are well-equipped with both foundational knowledge and insights into the latest advancements in neurovascular care. Our annual conference continues to be a highlight, bringing together distinguished experts for engaging discussions and invaluable knowledge exchange.

As we navigate the complexities of neurovascular care, let us seize the opportunities for learning, collaboration, and innovation that ANVC provides. Together, we can shape the future of our field, advancing the standard of care and making a lasting impact on patient outcomes.

#becausestrokepatientsdeservenothingless

Warmest regards,

Alicia Richardson

President, Association of Neurovascular Clinicians

Join ANVC

Membership provides numerous benefits, including:

- Year-round virtual continuing education and webinars
- Professional networking opportunities
- Discounts and access to discussion forums

Additional advantages include:

- Membership in the only stroke-specific organization for non-physicians
- Open access to the journal Stroke Clinician

Review Courses

ANVP

The ANVP review course is an advanced level course geared toward Advanced Practice Providers (APPs) working in the acute neurovascular setting. The review course focuses on expertise in assessment, medical diagnosis by localization and neuroimaging interpretation, and hyperacute treatment decision-making. The ANVP's incorporation of key pathophysiologic concepts and evolving research findings also ensures expertise in methods for establishment of stroke pathogenic mechanism with related secondary prevention knowledge and competencies. The ANVP supports APPs at numerous acute care practice sites that aim to use APPs in expanded roles supporting telemedicine, mobile stroke units, and stroke emergency response.

NVRN

The NVRN review course is designed for registered nurses with a focus exclusively on acute neurovascular care. This review course covers topics on neuroanatomy, clinical localization, reperfusion treatments, complication avoidance, secondary stroke prevention, and more! Ideal review course for stroke unit nurses and neurocritical care nurses.

ASC

The ASC review course is designed to highlight the unique and essential contributions of a stroke coordinator. The review course focuses on stroke competencies including understanding and mastery of skills used to diagnose stroke, evidence-based management principles for both ischemic and hemorrhagic stroke, knowledge of role history and role evolution, stroke data collection, data analysis methods, and data presentation, quality management, and principles and strategies supporting effective adult education, change mastery, and time management.

CNIC

The CNIC review course was developed to recognize the unique and essential contributions of clinicians in neuro-interventional radiology. The CNIC review course discusses expertise in stroke competencies, including peri-procedural management of stroke, evidence based principles for both ischemic and hemorrhagic stroke, and complication avoidance and management. Ideal review course for nurses, technologists, or APPs working in the neurovascular interventional setting.

How Stroke Coordinators Can Facilitate Change

Joshua Adams, DNP, RN, CEN, CPEN, CCRN, NE-BC, CPPS, CPHQ

Melisse Maser, CRNP, FNP-BC, ANVP-BC

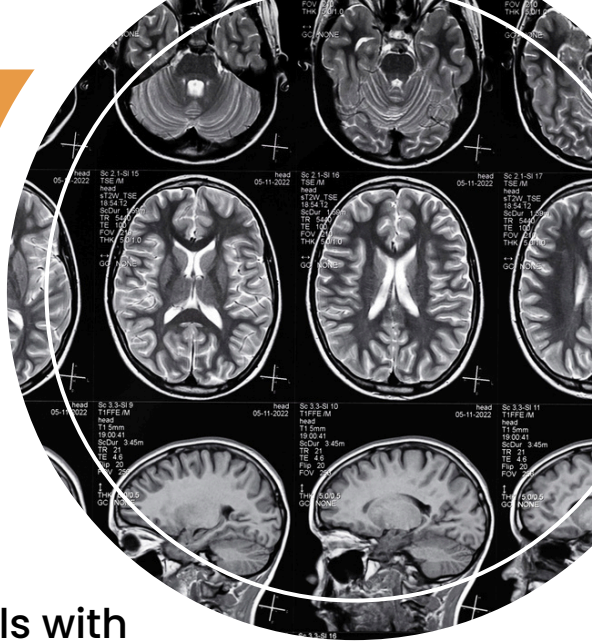

Stroke from Hypercoagulable States: Rheumatology Work-up and Management

Morgan Bittengle, FNP-BC

Stroke Mimic: FND

Kelly VanBussum, MSN, APRN, ANVP-BC, CNRN

**1.0 credit hour awarded
for this activity**

Enhance your skills with **Multi-Modal CT**

Course Objectives

Describe the advantages, disadvantages, and limitations of multi-modal CT imaging

Differentiate pathologic changes from normal findings on non-contrast CT imaging

Score ASPECTS on non-contrast CT in anterior circulation acute stroke patients

Identify pathologic findings on CTA imaging for ischemic and hemorrhagic stroke

Understand how to use findings produced by CTP imaging

\$75 members, \$150 non-members

Self-paced, on demand virtual platform

8.0 credit hours awarded for this activity
